INSIGHT & RECOMMENDATION

Key findings and strategic actions

INSIGHT

Churn Rate: 20.37% **Customers Lost:** 2,000 **At-Risk Customers:** 9% (718) **Value Lost (France):** £175M

1. High churn rate (20%) with female customers disproportionately affected, indicating possible product or service misalignment.
2. Early churn (23% in first year) suggests onboarding and initial experience are critical failure points.
3. Long-tenure customers (5+ years) especially in low risk class are also leaving, indicating declining loyalty over time.
4. Germany has the highest churn rate (32.44%), France presents the highest financial risk (£175M lost) despite lower churn rate, prioritize high-value retention here.
5. 9% of customers are at high risk of getting churned, offering an immediate opportunity for targeted intervention.

RECOMMENDATION

1. Target the 9% of customers identified as high-risk with **personalized retention strategies** such as incentives, proactive communication, and loyalty offers to reduce potential churn.
2. Investigate and resolve key pain points affecting female customers through **feedback analysis, improved service delivery, and tailored product offerings**.
3. Prioritize retention of **high-balance customers**, especially in France, by offering **premium services, relationship management, and exclusive benefits** to minimize financial loss.
4. Reduce first-year churn by strengthening **onboarding, engagement, and support within the first 3–6 months** of customer lifecycle.
5. Introduce **loyalty programs and rewards** for customers with 5+ years tenure to maintain engagement and prevent attrition.
6. Develop targeted actions for high-churn regions like Germany by addressing **local customer behavior and service gaps**.
7. Refine the risk model by incorporating **customer behaviour and usage patterns** to improve early detection and intervention.
